

# Enabling Maritime Decarbonization by Using Nuclear Technology

---

European Tugowners Association  
November 9 2023

# Contents

- Nuclear Maritime Applications
- Advanced Reactors
- Maritime Decarbonization
- Nuclear - Maritime Use Cases
- Potential Benefits
- Commercial Nuclear Challenges
- Future Collaboration

# Nuclear Maritime Applications

- United States

- 1940: Research on marine nuclear propulsion
- 1953: 1<sup>st</sup> naval test reactor, Mark 1
- 1955: 1<sup>st</sup> nuclear submarine, USS Nautilus
- 1962: U.S. Navy 26 nuclear submarines, 30 under construction
- 1959: 1<sup>st</sup> nuclear-powered merchant vessel, N.S. Savannah

Current Military Use of Nuclear Power	
US Navy	<ul style="list-style-type: none"><li>• 73 Submarines</li><li>• 11 Aircraft Carriers</li></ul>
Russian Navy	<ul style="list-style-type: none"><li>• 21 Submarines</li><li>• 1 Battlecruiser</li></ul>
China	<ul style="list-style-type: none"><li>• 14 Submarines</li></ul>
British Navy	<ul style="list-style-type: none"><li>• 10 Submarines</li></ul>
France	<ul style="list-style-type: none"><li>• 9 Submarines</li><li>• 1 Aircraft Carrier</li></ul>
Indian Navy	<ul style="list-style-type: none"><li>• 1 Submarine</li></ul>

# Advanced Reactors

Improved designs of conventional reactors are expected to reduce economic, security, technical, safety and regulatory barriers.

## Advanced reactors may have:

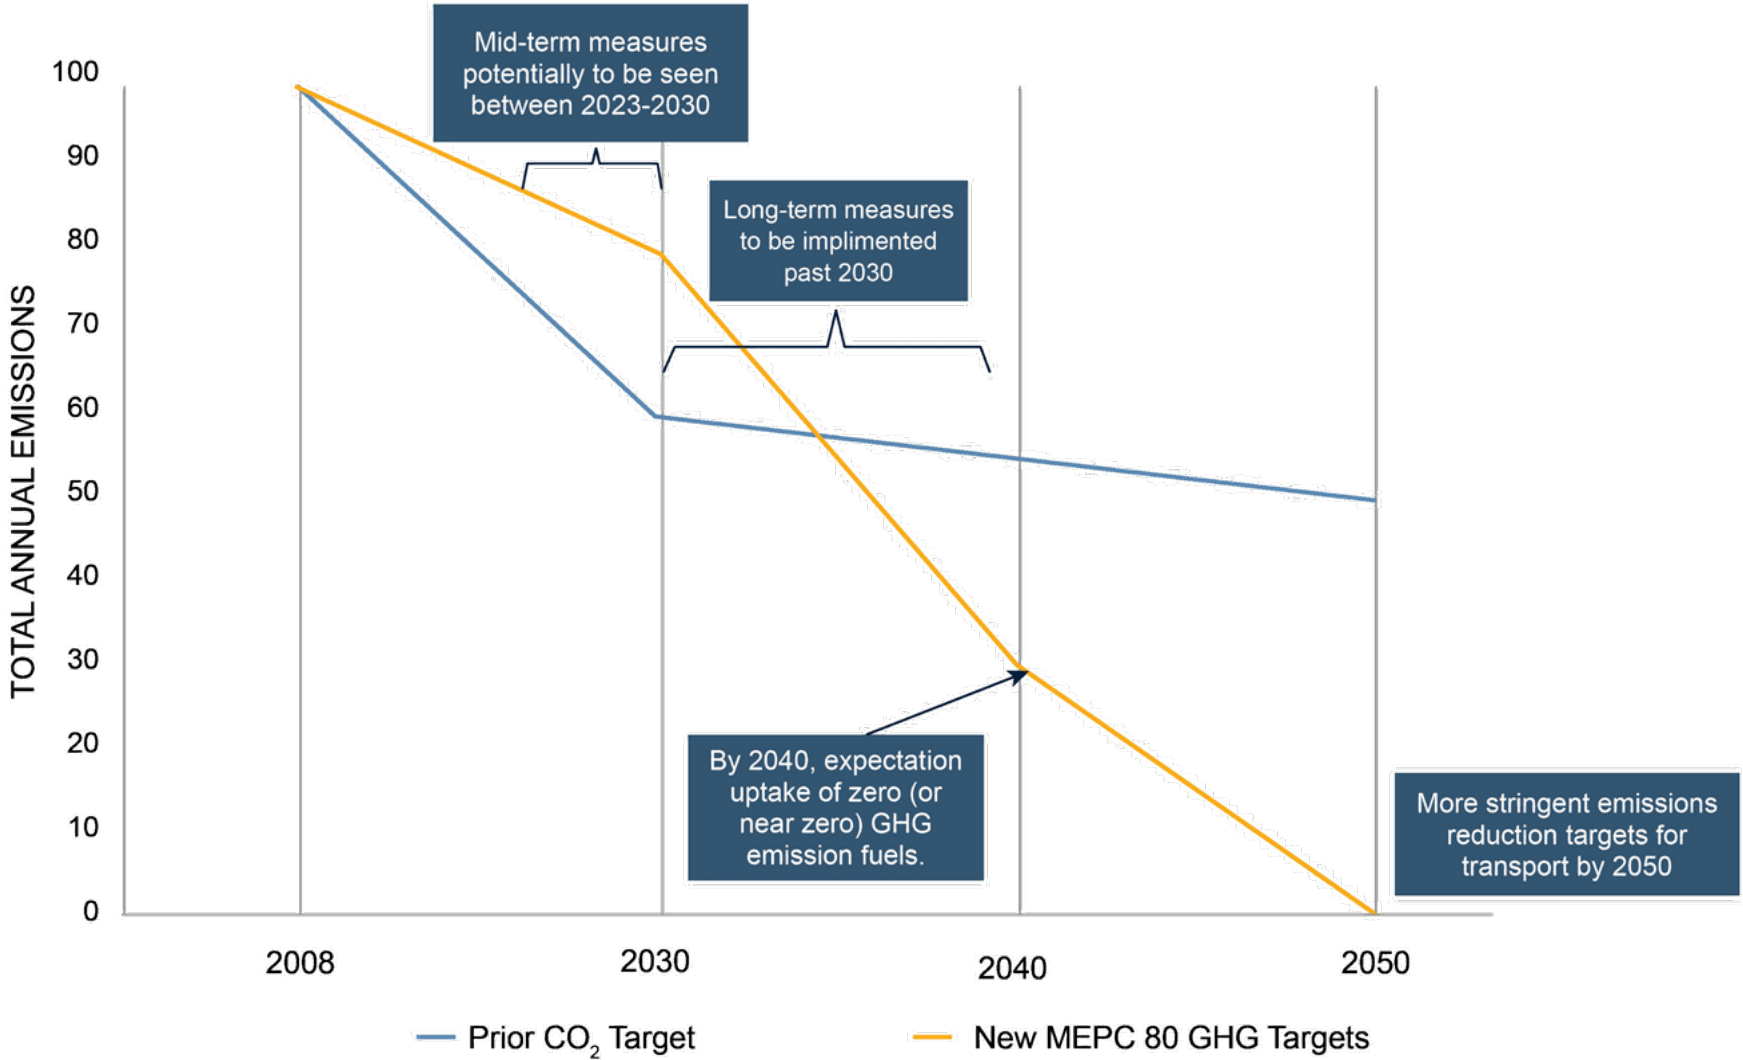

- Inherent safety features
- Greater fuel utilization
- Lower waste yields from conventional nuclear applications
- Superior reliability
- Resistance to proliferation
- Increased thermal efficiency
- Integration with electric and non-electric applications

## Advanced Reactor Types

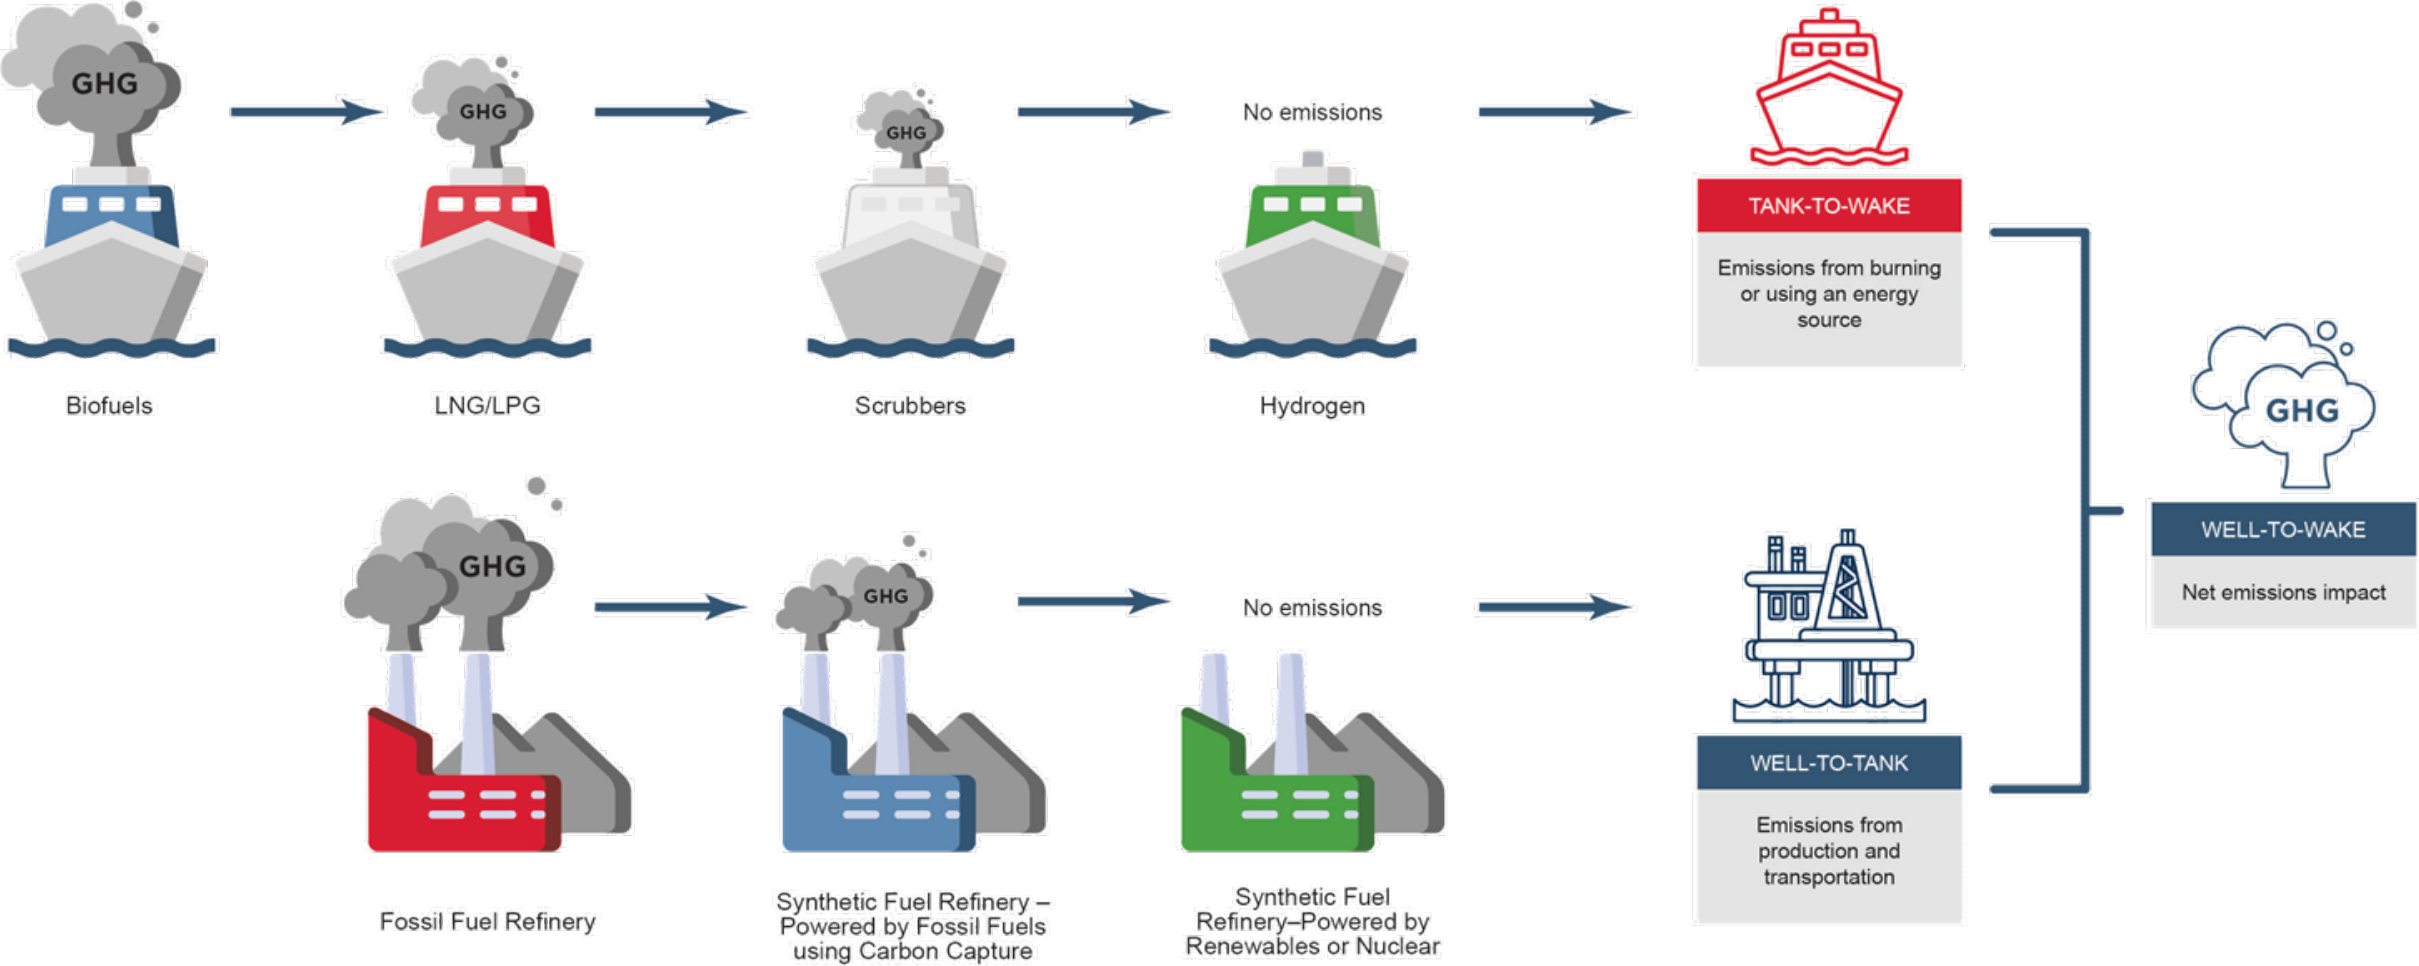

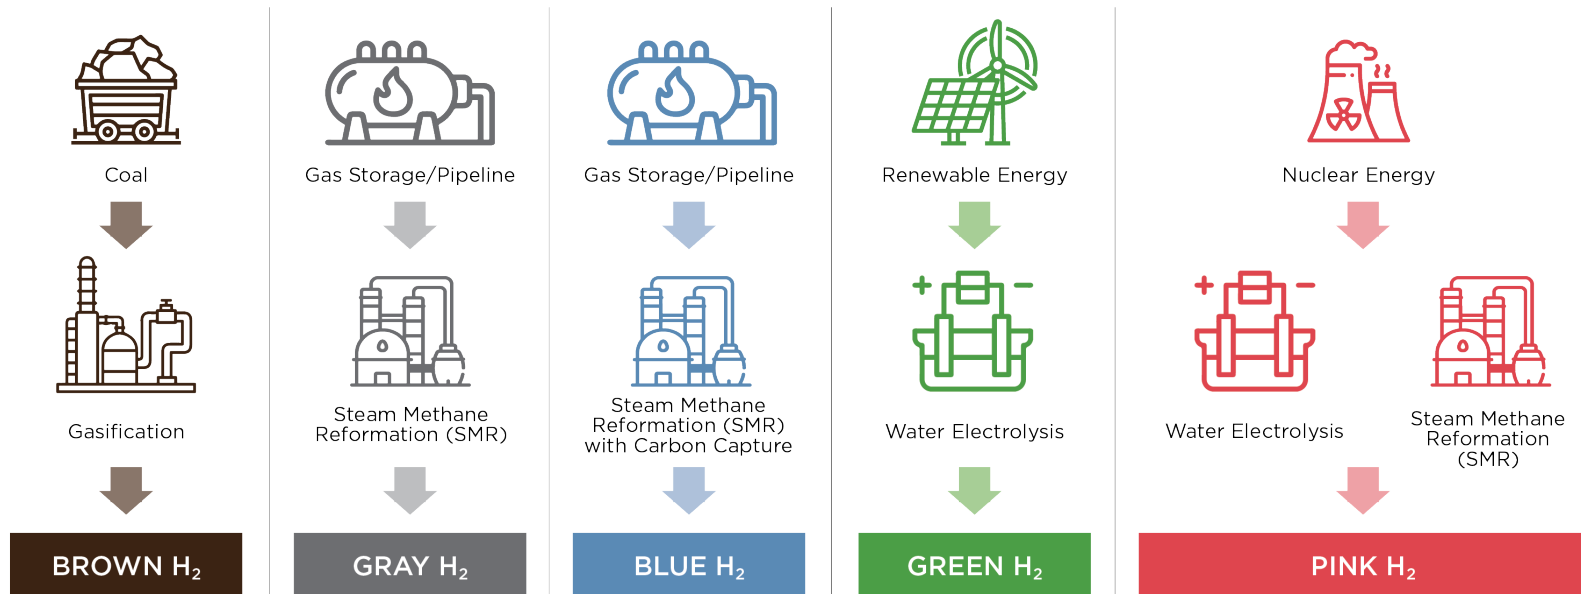

# Impact of MEPC 80

# Eliminating Emissions from Fuels

# Future Fuels

 More available

 Less costly

 More GHG and carbon emissions from production

 Mid- and long-term decarbonization solutions

 High cost

 Low availability

 Mid- and long-term decarbonization solutions

 Strong opportunity for competitive fuels

 Not widely developed

# Nuclear – Maritime Use Cases

## Land-Based Support

- Electricity for Onshore Power Supply (OPS) to other vessels
- Produce marine fuels
- Power marine support infrastructure, shipyards, and ports

## Coastal and Offshore Industry

- Floating power barge for grid electricity
- Zero-carbon power for oil and exploration
- Suitable for arrays of microreactors or small modular reactors

## Nuclear-Electric Propulsion

- Reactors fitted for high power
- Zero-carbon switch
- Reduce or eliminate bunkering

# Commercial Nuclear Benefits

## The Blue Economy is Suited for Nuclear

- Available space away from population centers or areas with land restrictions
- Readily available water as a heat sink
- Seismic Isolation
- Desalinated/pure water available for hydrogen production from steam methane reforming or electrolysis

# Commercial Nuclear Challenges

## Safety

- Risk Management
- Safety Management Considerations

## Regulatory

- International (IAEA, IMO).
- Flag State.
- Coastal State

## Operational

- Nuclear maintenance at shipyards.
- Terminal considerations.
- Crew training requirements.
- End of life considerations.

## Commercial/Social

- Capex requirements for construction.
- Trade location limitations.
- Public perception and acceptance.
- Public/private partnerships.

# Nuclear Vessels Concept Study (Herbert Study)

- Advanced Reactors integrated with ship systems for propulsion
- Showcasing early possibilities of arrangements for reactors on vessels
- Considering the operational benefits for commercial vessels

Suezmax Tanker

14K TEU Container carrier

# Herbert Study Findings

## Ship Considerations

- **Nuclear-Electric Plant** is the preferred arrangement
- **The position of the nuclear reactor likely at mid-ships**
- **Battery location** needs to account for risks
- **Turbomachinery and electrical generation plant** need to be designed with reactor type

## Reactor Considerations

- **Reduce size & weight:** optimize per operational requirements
- **Maintainability** during short periods of drydocking
- **Minimize the need for re-fuelling**
- **Flexible power** to support variable load requirements typical of time at sea

# New Technology Qualification

- New Technology Qualification for a Compact Molten Salt Reactor to power a commercial power barge
- December 2020: New Technology Qualification Feasibility Statement issued

## IN THE SPOTLIGHT: ABS completes feasibility study on Molten Salt Reactor Technology

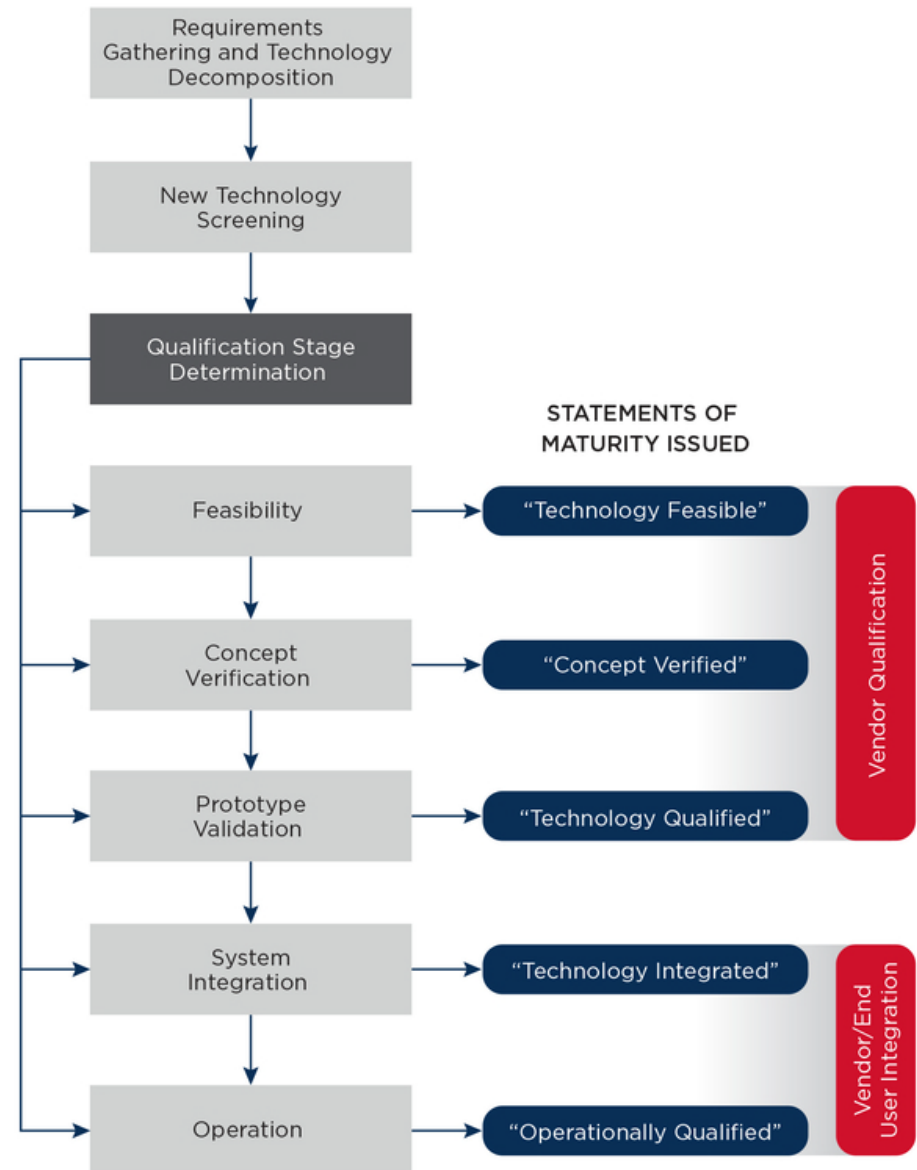

THU, DEC 17, 2020 15:36 CET

eSeaborg

# Future Collaboration

- ABS can assist shipowners and operators researching alternative fuels, like nuclear power, through:
  - Risk assessments
  - Modeling and simulation
  - Techno-economic analysis
  - Joint projects
  - Qualification of New Technologies
  - Approvals in Principle

# Thank You
